

**SCP 012-130 ISO is a series of piston pumps with a fixed displacement for mobile and stationary hydraulics.**

SCP 012-130 ISO covers the entire displacement range 12-130 cm<sup>3</sup>/rev. at a maximum pressure of 400 bar. The pump's well dimensioned, double tapered roller bearings permit high shaft loads and lead to excellent speed characteristics. The pump is drained externally. It is speed-optimised and therefore supplied for either left (L) or right (R) rotation direction.

**Other advantages:**

- High maximum speed while maintaining low noise levels
- Smooth operation over the entire speed range
- Long life due to high demands on material selection, such as bearings, seals, etc.

## Versions, main data

Code according to page 2, Versions, main data

Factors affecting the choice of shaft seal include the hydraulic pump housing pressure and the drainage oil temperature.

The drainage oil should have a maximum temperature of 75 °C with a Nitrile shaft seal and 90 °C with a Viton shaft seal.

These temperatures must not be exceeded.

The housing pressure must be equal to or greater than the external pressure on the shaft seal.

## Minimum inlet pressure at suction port with increased speed

Operating above the max. pump speed  $n_{max}$  requires increased inlet pressure.

Note that the max. permissible speed  $n_{max}$  limit must not be exceeded.

## Filtering

Cleanliness according to ISO norm 4406, code 16/13.

## Hydraulic fluids

High performance oils meeting ISO specifications – such as HM, DIN 51524-2 HLP, or better – must be used.

A min. viscosity of 10 cSt is required to keep the lubrication at a safe level.

The ideal viscosity is 20 - 40 cSt.

If the suction line is more than 2 m long the internal diameter must be increased by 10 mm for each meter extension.

## Installation

- The pump housing should be filled with oil to at least 50% before starting.
- The drainage line must be at least 1/2" (13 mm) internal diameter and should be connected to topmost drainage outlet.
- The other end of the line should be connected to the oil tank at a point below the oil level.

**WARNING!**

When the pump is running:

1. Do not touch the pressure hose
2. Watch out for rotating parts
3. The pump and hoses may be hot
