Functional Description

4-way, 3-position spool type directional valve with 3/4-16 UNF connection thread, operated by dual solenoids, designed for installation into A4 (C-8-4) chambers of the block. The valve controls the flow direction of the fluid, changes the direction of the hydraulic cylinder piston rod or stops it.

Designation M9
- standard - without manual override

Designation M7
- handwheel with locking for both end positions

In case of solenoid malfunction or power failure, the spool of the valve can be shifted by manual override as long as the pressure in port 1(T) does not exceed 25 bar (363 PSI).
